

Bill and Jay,

I hope you both are doing well. See note below on the survey some of my colleagues at Texas A&M are doing on runway pavement markings. Any help in getting the word out and distributing to pilots would be greatly appreciated.

Chris Sasser is sending it out to the Wingtips email list and is asking Yasmina if she can tweet it out on her AOPA account.

Thanks!

Jeff

Subject: Survey regarding runway markings

Please forward this message to any pilot/flying groups that you are involved in or that you are aware of.

Greetings!

Texas A&M University and Purdue University are jointly conducting research evaluating the potential use of markings on runways to help pilots make better takeoff and landing decisions. These markings are intended for use at general aviation airports on runways that are 4,200 feet long or less. As

part of our information gathering effort, we are asking pilots to complete the survey identified in the link below. The survey has 9 questions and should take 10-15 minutes to complete. The only qualification to take the survey is that you need to possess a valid pilot's license. Feel free to share this link with friends and colleagues who are also pilots. The survey will be available until approximately mid-March.

<https://www.surveymonkey.com/r/RY6PQB9>

If you have any questions regarding this survey, please contact Gene Hawkins at (979) 845-9946 or gene.hawkins@tamu.edu. Thank you for your participation.
